

Globaltrack

Cross-Border Tracking Solution

Imagine having constant real-time information of your whole fleet at a glance and being able to effectively monitor the KPI's of your drivers and vehicles.

Globaltrack an award-winning technology based company, has a fleet management software known as Webtrack. At the core of Globaltrack's products and services are solutions for African fleet management challenges. The aim is to make transportation cheaper, simpler and more effective.

Globaltrack's cross-border tracking solution the DUO 950 is an internally designed and developed tracking device, allowing the user to record and transmit detailed information from vehicle and driver to the control room.

The advantage of the DUO 950 is that the user can track assets consistently regardless of the region in which they operate i.e. non-GPRS coverage areas. As a result of the satellite reporting capabilities of this unit, users do not have to incur exorbitant roaming costs.

Since Globaltrack develops the product, it offers great flexibility and simplicity in terms of continuous innovation. To ensure operational efficiency, the product is designed for fast installation.

To boost security the units come with free driver ID's that can be used as an anti-start mechanism. In addition to this, the driver ID's provide the user with information on the performance of drivers for the use of incentivising or identifying training requirements.

This product is also compatible with Globaltrack's fuel solution that has been benchmarked as an effective solution in Africa. This solution assists in preventing fuel contamination, fuel theft and identifies poor driving behaviour that increases fuel consumption.

Features and Benefits of the Cross Border Tracking Solutions

FEATURES	BENEFITS
Iridium Satellite Provider	Excellent satellite visibility and service coverage
Speed monitoring	Tool to reward or reprimand drivers, reduce fuel consumption and maintenance cost
Prohibited night/weekend driving	Moving report, avoid driver fatigue
Route monitoring	Monitor driving events in high risk areas
Security of load and drivers	Creation of geofences, panic button peripheral, trailer connect & disconnect events
Free driver ID	Closely monitor KPIs
Backup battery	Event of disconnection e.g hijacking, the unit can still report for up to 4 hours after disconnection.
Sim card removed/ sim card changed	Alerts the operator of any tampering on the unit
Trip Monitoring in both GPRS and Satellite	Assist in providing ETAs (Estimated Time of Arrival)
Webtrack	Mobile application can be downloaded for free, it is cloud-based and available in multiple languages.
Growth and Support Team	Expert Growth and Support Team through successful fleet management
