

# Globaltrack's Fuel Management Solution

Fuel accounts for about 40-50% of a fleet's total operating costs and rising fuel bills have become a nightmare for a lot of transport companies. Many fleet operators are unaware of the fact that fuel theft or fuel contamination may also be contributing to the rise in fuel bills.

Our fuel solution has been benchmarked as an effective fuel monitoring and savings solution in Africa. This solution assists in preventing fuel contamination, fuel theft and identifies poor driving behaviour that increases fuel consumption.

Globaltrack's Fuel Management Solution is a probe that is installed directly into the tank of a truck to effectively monitor fuel consumption from anywhere in the world.

Since Globaltrack develops the product, it offers great flexibility and simplicity in terms of continuous innovation. To ensure operational efficiency, the product is designed for fast installation.

Fuel cost management is our priority! One way in which we do this is through our fuel reconciliation's feature. This feature has been designed to save transporters time in maintaining accurate fuel data.

Manage the fuel levels of your trucks by comparing your trucks' fuel slips versus the fuel performance. Make informed decisions on when and where to fill up. Get our fuel management solution to take advantage of all our features relating to fuel cost management.

## Client Testimonials

Kobus Lombard of Specialized Transport in Mozambique was offered an obligation free demonstration through Globaltrack's proof of concept programme. The proof of concept programme allowed Globaltrack to demonstrate to Mr. Lombard how the Fuel Probes work and how it can lower the cost spent on fuel. Within a few weeks, Mr. Lombard noticed a staggering average of a 10% decrease in the cost of fuel used per truck, resulting in a \$650,000 per year savings in fuel expenditure.

High fuel bills were on Mr. Vernon Pillay, Director of Merrod Trucking's radar for the past five years. This is until Mr. Kelman Reddy, owner of PKR Transport told Mr. Pillay of his recent success of saving money on fuel since installing Globaltrack's Cross-Border and Fuel Management Solution. With Globaltrack's Fuel Solution, Merrod Trucking is able to save 40 – 50 litres per vehicle per trip. Mr. Pillay avoids roaming cost when his vehicles go cross-border, because once the vehicles are out of GPRS signal, Globaltrack's Cross-Border Solution switches over to satellite tracking.

With the driver ID tags, Mr. Pillay can successfully monitor the amount of fuel consumed by each driver and see violations like speeding and idling that increases the fuel consumption.
